Native Instruments recently released the new version of its popular DJ software, Traktor PRO 2. With many new features, the update is a must-have for DJs looking to improve their skills. This patch crack will allow you to download and install it easily on your Windows or Mac computer. Traktor PRO 2 is an enhanced version of NI's DJ software that has had many features redesigned. The most notable new features include: • 4 decks of cutting-edge technology, plus an additional deck displaying waveforms for instant overview of the music. An FX section can be assigned to each deck, and countless effects are available. An Auto Mix function allows automatic seamless transitions between tracks even without beat matching skills. These options are joined by many others, creating unlimited possibilities for creating DJ sets. • A new mixer design with visual feedback on all important parameters including filters, gains and EQs for each channel, as well as advanced quantize settings, 3 band EQ per channel and 3 band kill switches per channel. • The improved step-sequencer with quantize settings, scratches and roll. It can be used as a drum machine or for making "live" remixes, thanks to the numerous options available for its use. • A new real-time 4X4 mixer mode with an integrated compressor for each deck. • The essential content of Traktor LE has been incorporated in Traktor PRO 2 , thus making the learning curve straight forward and enabling users to immediately start practicing their mixing skills, which is often one of the biggest obstacles towards improving DJing skills. Native Instruments Traktor Pro 2 features several different MIDI controllers (or non-controllers). The Launchpad, which has been in Traktor Pro 1 since release, is not included in Traktor Pro 2. Traktor PRO 2 comes with a number of different controllers which users can use for a variety of tasks. Traktor 2 has a greater number of controller sets than the original Traktor. The following is a list of the current "standard" controller sets: The following controllers have become part of the standard set: The standard controller sets are available only when an appropriate version of Kontrol S4 or S3 is installed. In addition, several other controller sets have been released over time by third parties including:

Included in all versions from v2. 7.0 on, the Traktor Scratch Duo is a special controller made by Native Instruments which can be used to control both decks at the same time. Traktor Pro 2 is compatible with different types of DJ controllers, including CDJs, timecode vinyls, MIDI controllers or any MIDI-capable device. There are two methods to control Traktor Pro 2 with a controller:

When using Native Instruments merchandise with out-of-the-box settings they are intended to be used in conjunction with the software. However several third party developers have designed custom mappings for use on various types of controllers - see below for more information on these third party developments.
